The ORB-01 Akatsuki serve as the final defense of Orb, should the need arise. Developed in secret, the Akatsuki is hidden underneath the Orb mainland. The Akatsuki's design is similar to the GAT-X105 Strike Gundam that Orb assisted the Earth Alliance in developing. Aside from visual similarities, the Akatsuki is capable of using several packs similar to the Strike Gundam's "Striker packs." Perhaps the most unique feature of the Akatsuki is its "Yata-no-Kagami" anti-beam defensive reflection system, which is coated on the armor. Comprised of many tiny mirrors, the armor coating the Akatsuki to reflect any beam energy fired at it. (www.mahq.net)

Model number: ORB-01
Code name: Akatsuki
Unit type: prototype attack use mobile suit
Manufacturer: Morgenroete, Inc.
Operator(s): Orb Union; Three Ships Alliance
First deployment: C.E. 74
Accommodation: pilot only, in standard cockpit in torso
Dimensions: overall height 18.74 meters (standard version)
Weight: empty 69.6 metric tons (standard version); 87.82 metric tons ("Owashi" sky pack); 90.00 metric tons ("Shiranui" space pack)
Armor materials: unknown
Powerplant: unknown
Equipment and design features: sensors, range unknown; "Yata-no-Kagami" anti-beam defensive reflection system (armor coating)
Fixed armaments: Type 73J2 prototype twin beam saber, stored on main body, hand-carried in use; 2 x MSM5D 12.5mm CIWS, fire-linked, mounted in head; Model 71 defense shield, mounted on left arm
Optional fixed armaments: "Owashi" sky pack, mounts 2 x Type 73F modified high-energy beam cannon; "Shiranui" space pack, 7 x guided mobile beam turret system: M531R remote control unit (beam cannon; 2 x beam gun; beam shield emitter)
Optional hand armaments: Type 72D5 "Hyakurai" beam rifle, power rating unknown
